

# Cliff Note Charge Sheet 7

## SIMON WESSELY, GULF WAR ILLNESS AND SOMATOFORMIA

- The British “psychiatrist,” Simple Simon, was hired by the U.S. Pentagon to trash Gulf War Illness veterans, while he totally knew otherwise
- We’ve seen in previous SASH criminal charge sheets for the Justice Department, that mycoplasma causes fatigue via hypoxia via erythrocyte membrane osmotic changes and changes to mitochondria, etc.
- Astronauts can have real disease but if you are a soldier its consider Somatoform
  - If you are a medical school student or astronaut, your stress will produce a real disease (use Pubmed to discover cortisol does this even independently of stress), but if you are a plain old commoner or a soldier, no, you are having a “pattern of protection” (are scared), or are somatizing or producing scientifically valid illness biomarkers with your magical brain—the definition of somatization disorders
- A person can have a real disease, but not a real disease, and no one knows how they do it.
- We know the mechanism of fungal contamination (mycoplasma) of the vaccines or the vaccination of an immune suppressed person can result in the live viruses being reactivated as shown in the SASH charge sheets.
- No one asks Simon Wessely (or anyone else) how in the hell people can magically produce real signs of real illness in themselves and ONLY themselves.
  - It is logical to assume some of these people may have stress induced Epstein-Barr like the astronauts and medical students.
